

## Improving the facility's integration into its environment

As Carillon generating station has been in operation for more than 60 years, Hydro-Québec wants to use the opportunity the draft design provides to thoroughly understand the needs of stakeholders and explore the possibility of integrating the facility more harmoniously into its environment.

## We want to know what is important for you!

The public consultation starts now! Visit the Carillon generating station refurbishment project page and share your concerns, suggestions and needs by filling out the form.

General information bulletin

# Carillon spillway refurbishment project

Hydro-Québec invests in Carillon to rejuvenate the generating station. The refurbishment of the spillway will look at ways to ensure the spillway's long-term operability and its compliance with applicable standards.

## Project description

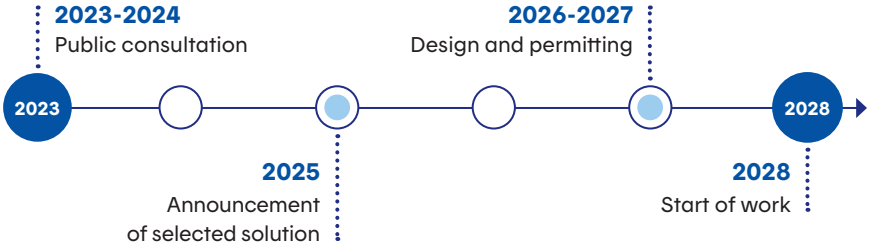

The Carillon spillway has 12 gates and was built between 1960 and 1963. In the months ahead, Hydro-Québec will conduct a number of studies and analyze different scenarios to determine the final scope of the project.

### The project will include the following:

- 1 Determination** of sensitive elements, work impacts and necessary mitigation measures
- 2 Assessment of the need** to intervene on embankment dikes around the generating station
- 3 Refurbishment** of the spillway

## Project schedule

## Location of Carillon facility structures
